

The cleaner does not reach all pool area.

Sarah Tichler - 2019-04-04 - 0 Comments - in Poolroboter

Position the power supply so that the cleaner can reach all places well.

Turn off the filter pump during cleaning with the pool cleaner.

Enter the maximum length of the connecting cable into the pool, but consider a corresponding minimum distance of the control unit to the pool.

The pool is too round or oval, the cleaner falls in certain places from the wall down as the degree (depending on the pool size) of the bend is too small.
