

Error Code E92 - too high salt level

Sarah Tichler - 2019-04-04 - in Whirlpools

If the salinity is too high, drain some of the pool water and top it up with fresh water.

Remove the electrolytic cell for inspection and cleaning if necessary.

Use salinity test strips to check the value of the water.

Add salt, if necessary. See "Salinity Information".

Make sure that the cable of the cell is firmly plugged into the socket.

If necessary, replace the cell.
