

My ladder is rusting.

Sarah Tichler - 2019-04-03 - in Leiter

INTEX ladders are stainless but not rust resistant. Please remove the ladder after each use. An improperly adjusted pH value or an excessively high chlorine value can cause the formation of rust in a very short time.

If you operate your pool with salt water, you need a zinc plate, which ensures equipotential bonding of ladders in connection with salt water systems. Salt water and salt water vapors can otherwise rust the material.
